The Tower of Capodomo. Half-Day.

One of the most suggestive towers of Argentario thanks to its dominant position, 350 m above sea level. From here you can see a wide stretch of coastline and with a clear sky you can admire both the island of Giannutri and the island of Montecristo. The tower was part of the defensive system of the Stato dei Presidi even if its foundation is much older. The tower is reached by a winding path along the ridge of the mountain.

*Length: about 5 km (round trip);

*In the last part of the path is exposed and can be bothersome if you suffer from vertigo. We suggest to do this trekking at sunset during the summer heat.
